Summary -- what's most important.

To put my strongest concerns in a nutshell:

- 1. We should have some ways of coupling programs byke garden hose--screw in another segment when it becomes when it becomes then it becomes necessary to massage data in another way.

 This is the way of IO also.
- 2. Cur loader should be able to do link-loading and controlled establishment.
- 3. Our library filing scheme should allow for rather general indexing, responsibility, generations, data path switching.
- 4. It should be possible to get private system components (all routines are sytem components) for buggering around with.
